

Instructions for Setting Up the DesignBHK Codebase

Here is the zip file containing the complete source code for the Web Dashboard and the Mobile App. Please follow these instructions to set everything up on your machine or deployment server.

PART 1: Setting up the Web Dashboard (Production Build)

1. Install Dependencies

After extracting the zip file, open your terminal, navigate into the 'designbhk-admin' folder, and install all required packages:
> npm install

2. Configure Environment Variables

Create a new file in the root folder named '.env.local' and paste the following database and security credentials into it:
DATABASE_URL="postgresql://neondb_owner:npg_FUWYEH4kdfL3@ep-blue-bread-at1czyea.c-9.us-east-1.aws.neon.tech/neondb?sslmode=require"
JWT_SECRET="designbhk-super-secret-jwt-key-2024-admin"
NEXT_PUBLIC_APP_URL="http://localhost:3000"

3. Generate Database Client

Run this command to synchronize the Prisma client:
> npm run postinstall

4. Build for Production

Compile the Next.js application into an optimized production build:
> npm run build

5. Start the Production Server

Start the live production server:
> npm run start

PART 2: Building the Mobile App (For Android/Google Play)

1. Install Mobile Dependencies

Open a new terminal, navigate into the 'mobile-app' folder:
> cd mobile-app
> npm install

2. Install Expo Build Tools

> npm install -g eas-cli

3. Build the Android App Bundle

> eas build -p android
(This will ask you to log into an Expo account. Once the build finishes, it will give you a direct link to download the .aab file)
